8.2.1. START and STOP conditions (See fig.1)

A HIGH to LOW transition on the SDA line while SCL is HIGH indicates a START condition.

A LOW to HIGH transition on the SDA line while SCL is HIGH defines a STOP condition.

Fig.1 START and STOP conditions.

8.2.2. TRANSFERRING DATA

The data on the SDA line must be stable during the HIGH period of clock. The HIGH or LOW state of the data line can only change when clock signal on the SCL line is low (see fig.3) .

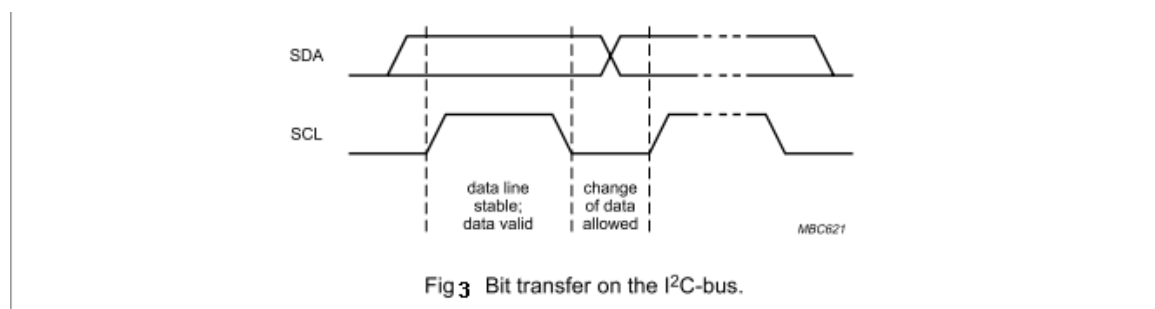

Fig 3 Bit transfer on the I²C-bus.

The receiver must pull down the SDA line during the acknowledge clock pulse so that it remains stable LOW during the HIGH period of this clock pulse. (See fig.4)

Distance between 2 defects should greater or equal to 15mm.

Remark:

- One pixel consists of 3 sub-pixels, including R,G and B dot(Sub-pixel=Dot)
- The defective area of the dot is larger than 50% of one sub-pixel area as one defect; less than 50% of one sub-pixel area will be not made as one failure.
- Bright dot is defined through 5% transmission ND filter as following:

- Judge defect dot and adjacent dot as following. Allow below (as A, B, C and D status) adjacent defect dots, including bright and dark adjacent dot. And they will be counted as 2 defect dots in total quantity.

Defects on the black Matrix, out of viewing area, aren't considered as a defect counted.

9.8. Classification of Defects:

- 9.8.1. Visual defects (Except no / wrong label) are treated as minor defect and electrical defect is major.
- 9.8.2. Two minor defects are equal to one major in lot sampling inspection.

9.9. Identification/marketing criteria:

- 9.9.1. Any unit with illegible / wrong /double or no marking/ label shall be rejected.

9.10.Packing:

- 9.10.1. There should be no damage of the outside carton box; each packaging box should have one identical label.
- 9.10.2. Modules inside package box should have compliant mark.
- 9.10.3. All direct package materials shall offer ESD protection.

Note: 1.For humidity test, DI water should be used.

Inspection Standard: Inspect after 1-2hrs storage at room temperature, the sample shall be free from the following defects:

- Air bubble in the LCD
- Seal Leakage
- Non-display
- Missing Segment
- Glass Crack
- IDD is greater than twice initial value.
- Others as per QA Inspection Criteria

2. No defect is allowed after testing.

3. ESD should be applied to LCD glass panel, not other areas (such as on IC and so on)
IDD should be within twice initial value.

In case of malfunction defect caused by ESD damage, if it would be recovered to normal state after resetting, it would be judged as a good part.

4. For the item in end product, the test should be implemented by customer.

11. Precautions and Warranty

11.1. Safety

- 11.1.1. The liquid crystal in the LCD is poisonous. Do not put it in your mouth. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water.
- 11.1.2. Since the liquid crystal cells are made of glass, do not apply strong impact on them. Handle with care.

11.2. Handling

- 11.2.1. Reverse and use within ratings in order to keep performance and prevent damage.
- 11.2.2. Do not wipe the polarizer with dry cloth, as it might cause scratch. If the surface of the LCD needs to be cleaned, wipe it swiftly with cotton or other soft cloth soaked with petroleum IPA, do not use other chemicals.

11.3. Storage

- 11.3.1. Do not store the LCD module beyond the specified temperature ranges.

11.4. Metal Pin (Apply to Products with Metal Pins)

11.4.1. Pins of LCD and Backlight

- 11.4.1.1. Solder tip can touch and press on the tip of Pin LEAD during the soldering

11.4.1.2. Recommended Soldering Conditions

Solder Type: Sn96.3~94-Ag3.3~4.3-Cu0.4~1.1

Maximum Solder Temperature: 370℃

Not Recommended

11.4.2.8. Solder Pad

11.5. Operation

- 11.5.1. Do not drive LCD with DC voltage
- 11.5.2. Response time will increase below lower temperature
- 11.5.3. Display may change color with different temperature
- 11.5.4. Mechanical disturbance during operation, such as pressing on the display area, may cause the segments to appear "fractured".

11.6. Static Electricity

- 11.6.1. CMOS LSIs are equipped in this unit, so care must be taken to avoid the electro-static charge, by ground human body, etc.
- 11.6.2. The normal static prevention measures should be observed for work clothes and benches.
- 11.6.3. The module should be kept into anti-static bags or other containers resistant to static for storage.

11.7. Limited Warranty

- 11.7.1. Unless otherwise agreed between New Vision Display and customer, New Vision Display will replace or repair any of its LCD and LCM which New Vision Display found to be defective electrically and visually when inspected in accordance with New Vision Display Quality Standards, for a period of one year from date of shipment.
- 11.7.2. The warranty liability of New Vision Display is limited to repair and/or replacement. New Vision Display will not be responsible for any consequential loss.
- 11.7.3. If possible, we suggest you use up all modules in six months. If the module storage time over twelve months, we suggest that recheck it before the module be used.
